

Use Case Hotel Building

Batteryless wireless switches control light and shading

Batteryless wireless window contacts monitor window status

Batteryless access card switches control heating and lighting

Actuators control heating, ventilation and shading

Occupancy sensors trigger lighting and climate control systems

Wireless actuators control radiators, room controllers govern underfloor heating

Batteryless liquid detection sensors monitor fluid leaks

Batteryless wireless control units allow for optimal climate conditions and maximum operating comfort

Networked smoke sensors set off fire alarms to trigger emergency response

Use Case Hotel Building

And these are the benefits for

Architects

- Maintenance-free, interoperable wireless sensors
- Freely positionable products which can be placed on glass, stone, wood or furniture as required
- Flexible room configuration

Specifiers

- Simplified planning and high flexibility through freely positionable devices
- Interoperable products
- Compatibility with other building automation systems (KNX, LON, BACnet, TCP/IP)

System integrators / Contractors

- Speedy, flexible installation / system start-up without downtime
- Simple retrofit during undisturbed operation
- No cabling, no drilling, no noise/dust/dirt

Investors / Property Owners

- Reduced cost of installation and operation
- Flexible space planning and easy restructuring
- Less downtime during renovation
- High energy savings
- Interoperable and scalable standard solutions

Facility Managers

- Flexibility, no maintenance needed
- Optimized servicing
- Effective manpower use
- Increased safety levels
- Faster reaction to system faults
- Interoperable and scalable standard solutions

Facility users

- Enhanced comfort
